

Mosquito Contract Potential Proposers:

Re: August 26, 2016 Request for Information

Dear Proposers:

On August 26, 2016, Hancock County received the below stated request for information concerning the RFP for mosquito services. The County's response to that request is italicized.

Good Afternoon! In response to our conversation and after examining the Mosquito Control RFP addendum, I would like some clarification on the changes in the scope of work, if any, for the inclusion or exclusion of the NASA buffer zone. The current RFP specifications, for example, call for spraying/ treating 250,000 acres by ground, 40,000 acres by air and the application of 30 million square feet of larviciding per calendar year. These levels define actual area treated over a annual period and are independent of the geographic territory covered. 1. Is the intent with the removal of the NASA Buffer zone for the trucks and aircraft to still treat the same amount of "treated acres" as defined in the RFP? If not, then what are the levels of truck adulticiding acres, aerial acreage, and larviciding sq feet is desired for the reduced geographic pricing?

*- The quantities and treated areas stated in Section 2.02 of the request are not modified by the Addendum. Proposers must also be aware of the requirement of section 13. Quantities providing that those quantities are "minimum contract requirements; however, the contractor shall be required to provide all services necessary to comply with the Contract requirements up to the maximum levels described elsewhere in these specifications."*

2. Does Hancock County request that the bid specs and addendum are bound into the Contractors submitted proposal or is the County only seeking that "Exhibit B" be included?

*- Per section 8, all addenda are part of the contract documents and binding upon the proposers. All bid specs, addendum and Exhibit B need be included in proposal.*

3. As a result of the addendum and pending any changes, Is Hancock County currently requesting two unique proposals or are they requesting two pricing structures based on the different parameters as defined?

*- Proposers should submit a separate and distinct price for the two different inclusion areas. To the extent proposers would modify other aspects of the proposal given a contract for one defined area versus the other, proposers should provide the details of any distinctions or differences.*

Sincerely,

Felicity Arcement

County Administrator
